(54) LIQUID CRYSTAL DISPLAY DEVICE

(57)Abstract:

PURPOSE: To prevent light leakage from a non-display area as well as an OFF segment of a display area by depositing and arranging a first liquid crystal display panel provided with a shade layer and a second liquid crystal panel through a polarizing plate.

CONSTITUTION: A first liquid crystal panel 10 is formed out of a first transparent substrate 11 on which a first display electrode is formed and a second transparent substrate 14 on which a first common electrode 13 is formed, in an integrated manner. A second liquid crystal panel 20 is formed out of a third transparent substrate 12 on which a second display electrode 22 is formed and a fourth transparent substrate 25 on which a second common electrode 24 is formed, in an integrated manner. A polarizing plate 30 is placed between the first and the second liquid crystal panels 10 and 20. A metal shade layer 16 made of metallic material such as nickel is formed on the first as well as the second liquid crystal panels NO, 20. A plurality of fret lines extended from a first segment electrode 12 are arranged on one end of the first transparent substrate 11, and a plurality of first extraction electrodes 15 are formed on the end part of the first transparent substrate 11.

(54) 【発明の名称】 液晶表示装置

(57) 【要約】

【目的】 ネガ型液晶表示装置の表示領域においての非選択の表示パターンからの光漏れを防止する。

【構成】 遮光膜が設けられた第1の液晶表示パネルと第2の液晶表示パネルの夫々に形成された表示用電極（セグメント電極）側の基板を偏光板を介して夫々の引き出し電極を重畳するように積層配置する。
